

Gold Layer HR Data: Documentation

Purpose of Gold Layer

The Gold Layer is an **analytics-ready layer** built on top of the Silver Layer. Its main purposes are:

1. **Simplified and enriched HR data** – Combines multiple columns, calculates metrics, and categorizes key attributes for easier reporting.
 2. **Business-friendly categorization** – Employees, applicants, and trainings are grouped by tenure, age, engagement, satisfaction, and training duration.
 3. **Optimized for analysis** – Gold views are read-only, meaning they can be used for dashboards, reports, and BI tools without altering Silver Layer data.
 4. **Standardized key fields** – Status, department, job titles, and age groups are normalized across tables for consistency.
-

General Workflow

1. **Drop existing views if they exist** – Ensures no conflicts when creating new views.
 2. **Select and enrich Silver Layer data** – Combines first and last names, calculates age and tenure, categorizes numeric scores.
 3. **Create categories** – Makes data analysis simpler (e.g., **High**, **Medium**, **Low** for engagement).
 4. **Preserve numeric values** – Raw data remains intact for accurate metrics.
 5. **Provide read-only access** – Users can query without affecting underlying tables.
-

Detailed View-Level Transformations

1. Employee Data View (**vw_hr_employee_data**)

- **Source Table:** `silver.hr_employee_data`
- **View Purpose:** Combine and categorize employee data for reporting and dashboards.

Key Transformations:

1. **Full Name** – Combines `FirstName` + `LastName` for easier readability.
2. **Tenure Group** – Calculates number of years between `StartDate` and `ExitDate` (or today if still active):
 - `0-1 Year, 1-3 Years, 3-5 Years, 5+ Years`
3. **Employee Status Standardization** – Converts `TerminationType` and `EmployeeStatus` into simple categories:
 - Active, Deactive, Offer Cancelled
4. **Age Calculations** – Computes age at `StartDate` and `ExitDate`.
5. **Age Group Categorization** – Groups employees into: `Under 25, 25-34, 35-44, 45-54, 55+`.
6. **Preserve Key Attributes** – Job title, supervisor, business unit, gender, location, department, performance scores.

Business Benefit:

- HR dashboards can show tenure distribution, age demographics, and employee statuses easily.

2. Recruitment Data View (`vw_hr_recruitment_data`)

- **Source Table:** `silver.hr_recruitment_data`
- **View Purpose:** Simplify applicant data for analytics.

Key Transformations:

1. **Full Name** – Combines first and last names.
2. **Application Status Simplification** – Converts **Applied** → **Pending Review**.
3. **Previous Job Department** – Cleans and standardizes department information from Silver Layer.
4. **Applicant Age** – Calculates age at **ApplicationDate**.
5. **Age Group Categorization** – **Under 25, 25-34, 35-44, 45-54, 55+**.
6. **Preserve Contact & Education Info** – Phone, email, address, city, state, country, education, years of experience.

Business Benefit:

- Enables analytics on applicant demographics, department trends, and status tracking.
-

3. Employee Training View (**vw_hr_employee_training**)

- **Source Table:** **silver.hr_employee_training**
- **View Purpose:** Categorize training data for reporting purposes.

Key Transformations:

1. **Training Duration Category:**
 - 1 day → **Very Short**
 - 2-3 days → **Short**
 - 4-5 days → **Medium/Long**
 - Others → **Other**
2. **Preserve Training Cost** – Numeric values kept intact for cost analysis.

Business Benefit:

- Easy reporting on training programs, duration trends, and budget planning.
-

4. Employee Engagement View (vw_hr_employee_engagement)

- **Source Table:** `silver.hr_employee_engagement_survey_data` + `silver.hr_employee_data` (for name)
- **View Purpose:** Enriched survey data for engagement analytics.

Key Transformations:

1. **Full Employee Name** – Joins Silver Employee table for readability.
2. **Survey Year & Month** – Extracted for trend analysis over time.
3. **Engagement Level Categorization:**
 - `High` (≥ 8), `Medium` (5-7), `Low` (< 5)
4. **Satisfaction Level Categorization:** Same thresholds as engagement.
5. **Work-Life Balance Level Categorization:**
 - `Good` (≥ 8), `Average` (5-7), `Poor` (< 5)
6. **Recency Metric:** `Days Since Survey = Current Date – Survey Date` for timely insights.

Business Benefit:

- HR can monitor trends in engagement, satisfaction, and work-life balance by employee, department, or tenure group.
-

Additional GOLD Layer Features

- **Drop & Recreate Views** – Ensures updates in Silver Layer are reflected.
- **Categorization Across Views** – Makes comparisons easier (Age Group, Tenure Group, Training Duration, Engagement Level).
- **Numeric Values Preserved** – Original scores and dates remain accessible for detailed calculations.
- **Read-Only** – Views provide analytics-ready data without risking modification of source tables.

Summary Table of GOLD Layer Views

View	Source	Key Transformations	Key Outcome
vw_hr_employee_data	silver.hr_employee_data	Full name, tenure, age & age group, status standardization	Clean employee master data for dashboards
vw_hr_recruitment_data	silver.hr_recruitment_data	Full name, status simplification, age & age group, department cleaning	Applicant demographics & recruitment analytics
vw_hr_employee_training	silver.hr_employee_training	Training duration category, preserve costs	Training program reporting & analysis
vw_hr_employee_engagement	silver.hr_employee_engagement_survey_data + employee join	Engagement, satisfaction, work-life balance	Employee engagement trend analysis

categorization
, survey
recency

✓ Key Takeaways

- Gold Layer transforms the **clean Silver data** into **business-ready views**.
- Categorization simplifies numeric, date, and code-based columns for decision-making.
- Views are **read-only**, safe for dashboards, reporting, and Power BI/Excel analytics.
- Trends, groupings, and metrics are pre-calculated, minimizing effort for end users.
